

# Recommended Salt

**enviolyte**<sup>®</sup>

**The absolute minimum salt purity recommended is 99.85% which can be found on the product specification sheet.**

## Cargill Hi-Grade Evaporated

Available around \$6.50/50lb bag, with a typical 99.97% purity. Money spent on high grade salt is easily worth it when weighed against the increased generator maintenance; loss of efficiency; and cost of replacing a cell.

## Morton

Also available around \$6.50/50lb bag, with a typical 99.97% purity.

## Other

Alternative salts can be used, however the lower the purity will cause the salt impurities to stick to the Anode and Cathode surfaces of the cell leading to;

- More frequent Acid flushing
- Reduced cell life
- Reduced product performance
